

Rev.io PSA **vs.** ConnectWise

Built specifically for Scipio Technologies based on your current stack and business challenges — showing why Rev.io PSA is the natural next step for an existing Rev.io Billing client.

Chattanooga, TN | MSP / UCaaS / VoIP | Current Rev.io Billing Client since 2017

SCIPIO'S CURRENT PAIN POINTS (DOCUMENTED FROM DISCOVERY)

REVENUE LEAKAGE

Finance manually re-enters CW contract data into Rev.io Billing after project completion. "Three or four mistakes today" — errors causing direct revenue leakage with no way to detect or quantify.

MULTIPLE SOURCES OF TRUTH

CW handles ticketing, PM, time tracking, and account management — but doesn't talk to Rev.io Billing. Data also lives in a SQL database that integrates with nothing. Disconnected systems, no single pane of glass.

MANUAL SPREADSHEET WORKFLOWS

Building a spreadsheet right now to upload billable hours into Rev.io. As professional services grows, this manual process will compound — more billing, more risk, more leakage.

TECHNICIAN CONFUSION

Techs constantly ask "where is this, where is that?" — losing time hunting across CW, ConnectWise Asio, ScreenConnect, and other tools. No unified workflow.

FINANCE TEAM BOTTLENECK

Accounting (Emily Klein / CFO) touches CW after every contract to manually input into Rev.io. Painful, slow, and prone to error. Large fear of mistakes and revenue leakage.

REPORTING & AI GAP

Current goal: reduce manual effort by 100%, improve reporting, and implement AI. CW cannot deliver this natively for a Rev.io billing customer. Data is too fragmented.

**Rev.io
PSA**

**ConnectWise
(Current)**

Built for Rev.io
Billing clients —
shared data,
zero
reconciliation

Scipio's today —
fragmented, manual,
error-prone

BILLING INTEGRATION — THE CORE ISSUE FOR SCIPIO

Rev.io Billing Integration

SCIPIO PAIN

✓ Native shared dataset — PSA and Billing share the same customer records, product catalog, and contracts. Zero manual re-entry. No mapping. No mistakes.

✗ No native Rev.io Billing integration. Scipio must manually enter contract data into Rev.io after every CW project completion — creating the leakage happening today.

Billable Hours to Billing

SCIPIO PAIN

✓ Time tracked in PSA flows directly into Rev.io Billing — no spreadsheet, no upload, no manual process. Professional services billing automated end-to-end.

✗ Scipio is currently building a spreadsheet to manually upload billable hours into Rev.io. As professional services grows, this process breaks.

Revenue Leakage Detection

SCIPIO PAIN

✓ Shared data means every billable event is captured automatically. Billing overages, unbilled time, and contract gaps are visible in real time — not discovered after the fact.

✗ "Three or four mistakes today" per discovery. No cross-system reporting means leakage can't be measured or caught proactively.

Telecom Tax Database

REV.IO ONLY

✓ Only PSA with native telecom

✗ No native telecom tax

billing tax compliance (USF, 911, regulatory fees) — calculated automatically per transaction for UCaaS/VoIP services.

engine. Requires AvaTax or manual configuration — adds complexity for a UCaaS/VoIP provider like Scipio.

WORKFLOW, AUTOMATION & MANUAL EFFORT

Single Pane of Glass

SCIPIO PAIN

✓ Tickets, billing, contracts, customer records, and reporting unified in one platform. Finance and techs work from the same data — no swivel chair, no SQL database workarounds.

✗ CW + Rev.io Billing + SQL database + CW Asio + ScreenConnect + multiple other tools. Multiple sources of truth. Scipio's stated goal: single pane of glass.

Finance Workflow

SCIPIO PAIN

✓ CFO and accounting team see real-time billing data without manual entry. Contract completion in PSA automatically generates billing items in Rev.io — no handoff required.

✗ Emily Klein (CFO) and team manually input contract items into Rev.io after reading CW. "Very painful, manual process" — large fear of mistakes and revenue leakage.

Technician Experience

✓ Mobile app with time tracking, service notes, and field invoicing. Techs find everything in one place — no "where

~ Techs familiar with CW today but still lose time hunting across multiple tools. Comfort with existing platform is

	is this, where is that?"	a switching consideration.
Agreement & Billable Time Tracking	✓ 15-minute increment time capture, overage detection, weekly billing alerts — all configured natively with direct Rev.io Billing sync.	~ CW supports time tracking, but the API integration with Rev.io Billing requires very specific agreement setup and breaks easily — flagged in Scipio's discovery.
Reporting & Analytics	✓ Unified reporting across PSA and billing — ticket profitability, margin gaps, tech performance. SQL-level querying and trend reporting available. Revii AI for instant insights.	✗ Reporting requires pulling from CW AND Rev.io separately. SQL database sits unintegrated. No cross-platform profitability view. Scipio's current goal: better reporting.

AI, AUTOMATION & SCIPIO'S 2026 GOALS

AI Assistant	✓ Revii AI — trend detection, customer sentiment, dictation-to-ticket creation (mobile and web). Built for service providers, not bolted on.	~ ConnectWise AI features in development via Asio — limited current availability, roadmap-dependent.
Reduce Manual Effort by 100% SCIPIO GOAL	✓ Native billing integration eliminates the single largest source of manual effort at Scipio today. Spreadsheet uploads, manual CW-to-Rev.io entry,	✗ Manual effort cannot be eliminated while CW remains siloed from Rev.io Billing. The gap is structural — not fixable with

	and SQL workarounds all go away.	configuration or API tweaks.
Data Scrubbing & Integrity	✓ Single dataset means one place to clean and maintain customer data. No sync issues, no duplicates between systems.	✗ Data lives in CW, Rev.io, and a separate SQL database — three systems to keep clean and reconciled. Currently not integrated with anything.
Professional Services Scaling	✓ As Scipio grows professional services, billable hour automation scales with them — no additional manual overhead.	✗ Scipio's manual spreadsheet process will get worse, not better, as professional services grows. More hours = more risk = more leakage.

INTEGRATIONS & SCIPIO'S TECH STACK

ConnectWise RMM	~ ConnectWise RMM integration currently in development — coming soon	✓ Native integration — Scipio uses today
N-Able Cove (Backup)	✓ Integration live now	✓ Native integration today via CW ecosystem
Veeam (Backup)	~ API available; native connector in development	✓ Supported via CW integrations marketplace
SentinelOne (EDR)	~ Integration planned	

		✓ Available via CW (Scipio uses today)
Pax8 (Distributor)	✓ Pax8 integration live now	✓ Pax8 integration available
TD SYNnex / Ingram Micro	~ On roadmap — live vendor pricing coming	✓ Live distributor pricing available today
Adobe Sign / E-Signature	✓ E-signature built natively in PSA — no add-on cost, no separate tool	~ Scipio uses Adobe Sign separately today — additional tool and cost
Dynamics CRM	~ API available; CRM integration in development	~ Scipio uses Dynamics separately — CW does not natively replace it
Rev.io Odin (UCaaS)	✓ Native integration with Rev.io Odin — unified UCaaS + billing + PSA for a telecom provider like Scipio	✗ No Odin integration

SCIPIO STAKEHOLDER MAP — WHO CARES ABOUT WHAT

Emily Klein

CFO / Finance Owner

Primary pain owner. Manual CW-to-Rev.io entry is her team's daily burden. Rev.io PSA eliminates

Mark Phillips

Director of Operations / Quoting

Quoting, e-signature, and workflow automation. Rev.io PSA consolidates

Terry Diamond

EVP / COO

Single pane of glass and integration strategy. Focused on eliminating manual effort

Jim (Exec Sponsor)

Executive / Integration Champion

Focused on single pane of glass, integration, and future M&A.

her biggest headache — no more manual input after project completion.

quoting + e-sign natively — reduces tool sprawl and manual handoffs.

and connecting billing to operations. Rev.io PSA is the bridge.

Rev.io PSA + Billing unified platform is exactly the consolidation story he wants.

The Bottom Line for Scipio Technologies

You are already a Rev.io Billing client. The question is: why keep a PSA that forces your finance team to manually re-enter data every day?

WHAT REV.IO PSA SOLVES FOR SCPIO — TODAY

- Eliminates the manual CW-to-Rev.io Billing handoff that causes revenue leakage
- Stops the spreadsheet process for billable hours — automated end-to-end
- Gives Emily Klein and finance a real-time, accurate view of billing without manual entry
- Unifies customer records, contracts, and billing in a single platform
- Revii AI delivers the reporting, trend detection, and data scrubbing Scipio needs now
- E-signature built in — consolidates Adobe Sign into one platform

WHY CONNECTWISE CAN'T SOLVE IT

- Structurally siloed from Rev.io Billing — the manual handoff is permanent, not fixable
- API integration requires very specific agreement setup and is fragile
- No shared dataset with Rev.io means reporting always requires reconciliation
- Scipio's goal of reducing manual effort by 100% is impossible while CW stays in place
- SQL database workaround is a band-aid on a structural problem
- As professional services scales, the manual billing process gets worse, not better
