

BUSINESS VALUE ASSESSMENT

ROI Analysis for Scipio Technologies

Prepared by Jamie Butler, Rev.io · April 2026

SECTION 1

What We Heard

Scipio Technologies (Peace Communications) has been a Rev.io Billing client since 2017. You know the platform and you trust it. The problem is the gap between your PSA and your billing system — and the manual work that lives in that gap every single day. These are your words, documented in discovery.

Revenue Leakage — "Three or Four Mistakes Today"

When a project completes in ConnectWise, your finance team manually re-enters that contract data into Rev.io Billing. Every manual

Manual Spreadsheet for Billable Hours

As professional services grows at Scipio, your team is actively building a spreadsheet to manually upload billable hours into Rev.io Billing. This process

Finance Team Bottleneck — Emily Klein

After every ConnectWise project completion, Emily Klein (CFO) and the accounting team manually input contract items into Rev.io Billing. This is described as a

step is an opportunity for error. By your own count, your team makes three or four billing mistakes a day — each one representing revenue that was earned but not captured correctly.

"Three or four mistakes today — errors causing direct revenue leakage with no way to detect or quantify."

doesn't scale. More professional services means more hours, more rows in the spreadsheet, and more risk — not less.

"Building a spreadsheet right now to upload billable hours into Rev.io. As professional services grows, this process breaks."

"very painful, manual process" — and Emily's team lives in constant fear of making a mistake that causes a billing error or a missed charge.

"Very painful, manual process — large fear of mistakes and revenue leakage."

Multiple Sources of Truth — No Single Pane of Glass

ConnectWise handles ticketing, PM, and account management. Rev.io Billing handles invoicing. A separate SQL database handles reporting. None of these systems talk to each other natively. Scipio's stated goal is a single pane of glass — and today, that simply doesn't exist.

"ConnectWise + Rev.io Billing + SQL database — three systems, no single source of truth."

15-Minute Billing Increments & Overage Tracking

Scipio needs to capture time in 15-minute increments, detect overages weekly, and invoice correctly — all across ConnectWise agreements that must then be manually reconciled with Rev.io Billing. The API integration between CW and Rev.io is described as requiring "very specific agreement setup" and is fragile.

Goal: Reduce Manual Effort by 100% + AI Reporting

Leadership has explicitly set a goal of eliminating manual effort entirely and implementing AI-driven reporting — revenue leakage detection, trend analysis, customer sentiment, and faster access to data for leadership requests. This goal is structurally impossible while ConnectWise and Rev.io Billing remain siloed.

"Agreement/
billable time
tracking needs:
15-minute
increments,
overage
detection,
correct invoicing
— API is very
specific and
breaks easily."

"Goal: reduce
manual effort by
100%, improve
reporting,
implement AI —
needs a single
unified platform."

SECTION 2

The Cost of Today

Conservative estimates based on Scipio's documented pain points. We use a fully-loaded cost of \$80,000/year per employee (\$38.46/hr) — appropriate for a Chattanooga-based UCaaS/VoIP MSP with finance and technical staff.

PAIN POINT	CONSERVATIVE ASSUMPTION	ANNUAL COST
Manual CW-to-Rev.io Billing re-entry 3 hrs/week × \$38.46/hr × 52 weeks (finance team)	Conservative 3 hrs/week of Emily Klein's team manually inputting ConnectWise contract completions into Rev.io Billing. Your own discovery notes called this "very painful."	\$6,000
Billable hours spreadsheet process 2 hrs/week × \$38.46/hr × 52 weeks	Building and managing a manual spreadsheet to upload professional services hours into Rev.io Billing. Conservative 2 hrs/week — will grow as professional services scales.	\$4,000
Revenue leakage from billing errors "3-4 mistakes/day" × avg \$50	By your own account, 3-4 billing errors daily. Conservatively modeled at \$50 average impact per error — missed charges, incorrect	\$37,500

PAIN POINT	CONSERVATIVE ASSUMPTION	ANNUAL COST
error × 250 working days	quantities, wrong rates. Likely significantly higher.	
Cross-system reporting overhead SQL database reconciliation + cross-platform data pulls for leadership	Pulling data from ConnectWise, Rev.io, and the SQL database separately to answer leadership questions. Conservative 2 hrs/week of senior staff time.	\$4,000
ConnectWise licensing cost (replaced by Rev.io PSA) Estimated CW annual cost for Scipio's user count	ConnectWise Manage licensing for Scipio's team. Rev.io PSA replaces this entirely — including all modules with no add-on costs.	\$8,400
Total Estimated Annual Cost of Current State	Conservative. The revenue leakage number alone (\$37.5K) justifies the switch. Everything else is margin recovery on top of that.	\$59,900 / year

SECTION 3

What Changes with Rev.io PSA

Scipio already trusts Rev.io for billing. The move to Rev.io PSA isn't a platform switch — it's closing the gap between your PSA and your billing system by bringing them onto a shared dataset.

**TODAY —
CONNECTWISE +**

**WITH REV.IO PSA —
SHARED DATASET**

REV.IO BILLING SILOED

PSA: ConnectWise — no native Rev.io Billing integration

Billing handoff: Manual — finance re-enters every project completion into Rev.io

Billable hours: Spreadsheet upload process — grows with professional services volume

Data: CW + Rev.io Billing + SQL database — 3 separate sources

Billing accuracy: 3-4 errors/day — no proactive detection

Reporting: Manual cross-system pulls for leadership requests

AI: Not possible across fragmented systems

Quoting: Separate from billing — no auto-flow into contracts

Agreement tracking: Fragile CW-to-Rev.io API, specific setup required

PSA: Rev.io PSA — native shared dataset with Rev.io Billing

Billing handoff: Eliminated — project completion auto-generates billing items in Rev.io

Billable hours: Time tracked in PSA flows directly to billing — no spreadsheet, no upload

Data: Single unified dataset — one source of truth for PSA, billing, and reporting

Billing accuracy: Every billable event captured automatically — leakage detected in real time

Reporting: SQL-level querying across unified data — leadership answers in seconds

AI (Revii): Revenue leakage detection, trend analysis, customer sentiment, ticket profitability

Quoting: Native e-signature → auto-creates contracts + billing items on approval

Agreement tracking: 15-min increments, overage detection, weekly alerts — all native, no API fragility

THE ONLY PSA THAT SHARES A DATASET WITH YOUR BILLING PLATFORM

Scipio already bills through Rev.io. That means switching to Rev.io PSA isn't a migration to a new platform — **it's eliminating the gap between two platforms you already own.** No other PSA can offer this. ConnectWise will always require a separate billing integration that must be manually maintained. Rev.io PSA shares the same customer records, product catalog, and contract data as your billing platform — natively, with zero reconciliation.

SECTION 4

The Numbers

Year 1 ROI — conservative, based entirely on documented discovery. The revenue leakage number alone drives the math.

\$59,900

ANNUAL COST OF
CURRENT STATE

~\$13,200

EST. ANNUAL REV.IO
PSA COST
~\$1,100/MO EST.

~\$46,700

EST. YEAR 1
NET SAVINGS

THE REAL NUMBER THAT MATTERS

The \$37,500 revenue leakage estimate is conservative — it models just \$50 per error at 3 errors per day. If any single one of those daily errors involves a missed monthly recurring charge on a managed services agreement, the real number is far higher. **For Scipio, stopping the leakage alone pays for Rev.io PSA more than twice over in Year 1.** Everything else — the time savings, the ConnectWise cost

elimination, the AI reporting capabilities — is pure upside on top of that.

SECTION 5

What Happens Next

1

Guided Training and Configuration with Solutions Analysts

A dedicated Rev.io Solutions Analyst works hands-on with the Scipio team to configure the platform to your exact workflows — 15-minute time increments, overage rules, professional services billing, quoting templates, and Revii AI setup. Weekly calls and unlimited support until your team is fully live and confident.

2

Scipio Data Merge — Rev.io Billing + Rev.io PSA

Scipio's existing Rev.io Billing data — customer records, product catalog, billing history, and contracts — merges natively with Rev.io PSA to create a single unified dataset. This eliminates the manual handoff between ConnectWise and Rev.io entirely, combining reporting and billing functionality into one platform for ease of use across your finance, operations, and technical teams.

This analysis is based on information shared by Scipio Technologies (Peace Communications) during discovery conversations with Jamie Butler at Rev.io, as documented in Salesforce opportunity notes. All cost estimates use conservative assumptions and a fully-loaded employee cost of \$80,000/year (\$38.46/hr). Revenue leakage modeled at \$50/error × 3 errors/day × 250 working days. Actual savings will vary based on team size, implementation, and adoption. Rev.io makes no guarantees of specific financial outcomes.
